

# Outdoor Bar

This is a design for an outdoor bar, intended to enhance the experience of a barbecue. The design called for a high degree of usability, and low manufacturing and purchase price.

The final design is formed from structural foam, aluminum and polycarbonate (sink, ice bucket and umbrella suspended drink dispensers). The set includes bar stools and umbrella. It features a wrap around handle that acts as a bumper, handle and towel/ accessory rack.

The bar is designed to echo the look of a generic barbecue; yet still be perceived as a fine piece of furniture.

Perhaps the most unique detail in this design, is the umbrella suspended drink dispensers. Not only do they keep the drinks shaded and cool; they can also mix the drinks according to valve settings before the mixing ring.
